Omatsuli Toritseju Joshua

SENIOR SOFTWARE ENGINEER & WEB3 ARCHITECT

Benin City, Nigeria | 08158075936 | joshuaomatsuli01@gmail.com

PROFESSIONAL SUMMARY

Results-driven software developer and Web3 architect with over 6 years of experience engineering desktop, mobile, and decentralized applications. Expert in Flutter, C#/.NET, Rust, and Solidity smart contracts. Passionate about creating secure cross-chain integrations, high-performance database design, and exceptional, micro-animated user interfaces.

TECHNICAL SKILLS

Programming Languages: C#, TypeScript, JavaScript, Python, Rust, Solidity, Dart, SQL

Frameworks & Libraries: .NET Core, Next.js, React, Flutter, Node.js, Express, Tailwind CSS

Databases & Storage: PostgreSQL, Supabase, SQL Server, MySQL, SQLite, Firebase

Specializations & Tools: Decentralized Exchanges (DEX), EVM Chains, NFT Standards, Git, UI/UX Design, REST APIs

WORK EXPERIENCE

Software Engineer | Blessed Christ Nigeria Limited, Benin City
2020 - 2026

- Designed and developed custom desktop and mobile applications using C#, .NET, and Flutter, establishing secure client architectures.
- Engineered a desktop-based Computer-Based Testing (CBT) software exam system handling randomized questions, real-time secure timers, and customized score indexing.
- Integrated database-driven settings and dynamic analytical reports using Microsoft SQL Server and PostgreSQL, optimizing indices to speed up reporting loads by 35%.
- Implemented responsive frontend components and managed state synchronization, reducing user interface error rates.

FEATURED DEVELOPMENT PROJECTS

Aether Swap & Wallet (Multi-Chain DEX)
Developed a non-custodial Web3 wallet and decentralized exchange supporting Ethereum EVM networks, Solana token transactions, and ERC-721/1155 NFT galleries using Solidity, Rust (Anchor framework), and Flutter.

Helius AI Engine (Low-Latency LLM Orchestration)
Created a distributed natural language orchestration service in Python and Rust with PgVector embeddings, handling cognitive routing and custom tool execution under 4ms latency.

Solaria RPG (Real-Time HTML5 Canvas Game)
Built a low-latency web game utilizing WebSockets and Node.js backend to synchronize multiplayer rooms at 60 FPS.

EDUCATION

National Innovation Diploma (NID) in Computer Software Engineering
Complete Computer and Technology Institute (CCTI), Adesuwa, Benin **| 2023**
